

Interesting Fact:

FCF Blue (known as brilliant blue) actually contains animal and insect products!

“It is a [synthetic dye](#) produced using [aromatic hydrocarbons](#) from [petroleum](#).^[1] It can be combined with [tartrazine](#) (E102) to produce various shades of green.”(source:Wikipedia)

This ingredient may be derived from animals. From PETA's [Caring Consumer](#): Pigments from animal, plant, and synthetic sources used to color foods, cosmetics, and other products. **Cochineal is from insects.** Widely used FD&C and D&C colors are coaltar (bituminous coal) ...
